

# Why use GS1 Standards?

GS1 Standards create a common foundation for business by uniquely identifying, accurately capturing and automatically sharing vital information about products, locations, assets and more.

Businesses can also combine different GS1 Standards to streamline business processes.

**GS1 Standards for Identification**

**Company & Location**

- Global Location Number (GLN)

**Product**

- Global Trade Item Number (GTIN)
- Serialised Global Trade Item Number (SGTIN)

**Logistics & Shipping**

- Serial Shipping Container Code (SSCC)
- Global Shipment Identification Number (GSIN)
- Global Identification Number for Consignment (GINC)

**Assets**

- Global Individual Asset Identifier (GIAI)
- Global Returnable Asset Identifier (GRAI)

**Services & More**

- Global Service Relation Number (GSRN)
- Global Document Type Identifier (GDTI)
- Global Coupon Number (GCN)

**GS1 Standards for Barcodes & EPC/RFID**

**GS1 Barcodes**

EAN/UPC  
 9 501101 021037

GS1-128  
 (00) 3 9501100 000001001 9

ITF-14  
 09501101021037

GS1 DataBar  
 (01) 0 9501101 02103 7

GS1 DataMatrix

GS1 QR Code

GS1 Composite Barcode

**GS1 EPC/RFID**

Electronic Product Code (EPC) RFID

EPC HF Gen 2

EPC UHF Gen 2

**GS1 Standards for Data Exchange**

**Master Data**

- Global Data Synchronisation Network (GDSN)

**Transactional Data**

- Electronic Data Interchange (EDI): EANCOM, GS1 XML

**Event Data**

- EPC Information Services (EPCIS)

Identify	Capture	Share
GS1 identification standards include standards that define unique identification codes (called GS1 identification keys) which may be used by an information system to refer unambiguously to a real-world entity	GS1 data capture standards currently include definitions of barcode and radio-frequency identification (RFID) data carriers which allow GS1 Identification Keys and supplementary data to be affixed directly to a physical object, and standards that specify consistent interfaces to readers, printers, and other hardware and software components that connect the data carriers to business applications.	GS1 standards for information sharing include data standards for master data, business transaction data, and physical event data, as well as communication standards for sharing this data between applications and trading partners. Other information sharing standards include discovery standards that help locate where relevant data resides across a supply chain and trust standards that help establish the conditions for sharing data with adequate security.
